Education

- 2024-2026 **MSc Computer & Embedded Systems Engineering** / TU Delft
(expected) Currently working on a thesis in collaboration with Flatiron institute.
Thesis topic: Performance evaluation and optimization of FINUFFT library.
- 2020-2024 **BSc Computer Science and Engineering** / TU Delft

Work Experience

- 2025-2026 **Functional Verification Intern:** ARM
Developed a tool to verify the compliance of an RTL multiprocessor design with the ARM formal Memory Model. I worked with AArch64 implementations of semaphore algorithms and tested their execution correctness.
- 2023-2025 **Product Specialist:** Ubiops
I was a Product Specialist at Ubiops, an AI deployment and orchestration company, where my role involved a broad set of tasks:
- Extending deployment platform to support ARM-based nodes.
 - Integrating AMD GPUs and Graphcore IPU's with autoscaling algorithm.
 - Managed complex Docker container infrastructure over a range of diverse machines.
 - Demonstrating latest LLM inference and finetuning on Ubiops platform.
- 2023 **Software Engineer Intern, IoT Predictive maintenance project:** MakeTek/Eaglescience
We developed a failure detection system for elderly care devices. It contained an SK-learn model that have been deployed on Raspberry Pi edge devices serving as central hubs and Django server to manage the fleet.
- 2022-2023 **Full stack developer Django/ReactJS:** Everspring
Part-time developer at a drop-shipping company that directly connects retailers and growers. There I worked on a complex back-end architecture with 30+ microservices in a hybrid team of remote and on-site developers. Also, developed a Shopify plugin using Django, ReactJS, GraphQL, and JWT, which distributed over 1000 products to hundreds of stores.
- Worked on a complex architecture comprising 30+ microservices within a hybrid team of remote and on-site developers.
 - Architected a high-performance plugin using Django, ReactJS, GraphQL, and JWT, which distributed over 1000 products to hundreds of Shopify stores concurrently while processing customer orders.
- 2021-2025 **Software Engineer / Mentor:** Dream Team Epoch
I was a Software engineer at AI focused TU Delft dream team. There I got experience of solving different deep learning challenges and used Computer Vision, NLP and Reinforcement learning techniques under a strict time constraints. We competed in worldwide AI competitions on Kaggle and other platforms and were ranked among best teams on the leader board:
- Deep Chimpact: Depth Estimation for Wildlife Conservation (Top 4%)
 - Task Mate Kenyan Sign Language Classification Challenge (Top 8%)
 - Hulkshare Recommendation Algorithm Challenge (Top 2%)
- Later I remained engaged in a team as Mentor, providing theoretical insights and coding advice to following teams, helping them achieve victories in several competitions.

Technical Skills

Programming languages: Python, Java, C++, C, PHP, JavaScript, Typescript, Go, Verilog/SystemVerilog

Key Technologies: Django, ReactJS, PyTorch, Linux, Docker, Cadence Toolset (Calibre, Genus, Modus, Xcelium), Verilator, JTAG

Markup: HTML, CSS, LaTeX

APIs: REST API, GraphQL

Cloud services: AWS, GCS

Non-technical

- Human Languages:
 - English (Fluent)
 - Lithuanian (Fluent)
 - Russian (Native)
